# Outside the Box Modern - Dailies

Thinking pattern towards development

October 2026

## 0.1 Introduction

Initially in the code we were using the exact same data (set) for neural network training, monitor creation and monitor testing. There could be 2 scenarios that might happen when creating the monitor in at those 2 times

### 0.1.1 Monitor creation at the same time of NN training

Boxes created with the labels itself. No throw away of data.

### 0.1.2 Monitor creation at a later stage with trained NN

Boxes created by comparing labels with predicted class. Id mismatched, the data has to be thrown away?
